

THE VOICE:

News Letter

February 2018

"While it is February one can taste the full joys of anticipation. Spring stands at the gate with her finger on the satch"

So here we come February!

Placement Drives

We started the month with two drives on the same day, 3rd February. **Techno Labs** and **Logic Matter** were the two companies who helped us start the month. These drives were for the CSE & IT students of our 2018 batch. The results are on the way. Another organization **Eunimart**, was here at our campus for recruiting our students. It was altogether a good experience with them.

With Eunimart team

We are happy to share that **C.H. Sunil** from CSE was selected.

College memento to the team

Mr. Abhinav addressing our students

We had our fourth drive on 8th February for **RDC Concrete**, which was for our Civil and Mechanical 2018 batch students.

Apollo Munich team was here with us on 9th for their pre placement talk at our campus. Our students participated at the **S&P Global** pool drive.

IMPORTANCE OF INTERNSHIP

Students these days are into different professional courses like Engineering, medical etc. The reason behind their joining the course is sometimes not clear to them. Later when they are into their course completion state, they get interested and want to work more on particular subjects. It is at this time when they get some exposures to what an internship is. In this article a glimpse of the importance of an internship will be given. An internship for an engineering student usually starts from the third year of the course. It could be a paid, for credit, unpaid or not-for-credit internship. Some of the reasons why internships are important are shared below:

Real world experience: Once students join a company as an intern, they get an opportunity to work hands on in a professional world. One gets actual work experience. It helps teaching more about the career path one's pursuing. An internship is like test drive before purchasing a car.

Networking: Interaction with professionals during an internship often gives an opportunity to attend formal

meetings and events. With the formal communication process one gains new connections and learn the 'to dos' and 'not to dos' in a professional environment. Networking helps acquire references and find new job opportunities. Internships can even provide you with a professional mentor.

Resume Builder: It's not easy to make a perfect resume. A decent format is the first thing which is required, which students ignore usually. Apart from the basic information of an individual, it's the internship and project that gives immense value to a resume. An engineering student's outcome is definitely shown through his/her project and the internships matter a lot, in regards to a strong resume. A good resume opens ones way to better future in respect to his/her career.

Time Management: Good management of time opens up more scope and time to work better and be more innovative. An internship makes an intern master of time management. While working in a fast paced professional environment one needs to know every minute counts. Time management is vital in every circumstance whether it's for attending meetings, finishing tasks on deadlines, making phone calls and every other activity of a day.

Career Foundation: Other than the above points mentioned, internships provide the building blocks for one's future. They help set the foundation of career. It is important that the students choose internships based on their interests and career prospects. As an intern the students have the opportunity to get their foot in the door with a company. Employers often use internships as a recruitment tool to test out future employees and in many cases, companies hire interns after graduation.

Internships are great tools to improve chances as a job applicant and help make a better potential employee. So invest in your career and look into becoming an intern.
